

Mezzanine::ManagerBase

Mezzanine::Singleton< SceneManager >

Mezzanine::SceneManager

```
classDiagram
    class ManagerBase["Mezzanine::ManagerBase"]
    class Singleton["Mezzanine::Singleton< SceneManager >"]
    class SceneManager["Mezzanine::SceneManager"]
    ManagerBase <|-- Singleton
    ManagerBase --> SceneManager
```

The diagram illustrates the relationship between three classes in the Mezzanine namespace. At the top, two boxes represent 'Mezzanine::ManagerBase' and 'Mezzanine::Singleton< SceneManager >'. A horizontal line connects them, with a vertical line extending downwards from the center. This vertical line connects to a third box at the bottom, 'Mezzanine::SceneManager'. From the top of the 'Mezzanine::SceneManager' box, a horizontal line extends to the left, ending in an arrowhead pointing to the bottom of the 'Mezzanine::ManagerBase' box. Another horizontal line extends to the right from the same point on the 'Mezzanine::SceneManager' box, ending in an arrowhead pointing to the bottom of the 'Mezzanine::Singleton< SceneManager >' box. This indicates that 'Mezzanine::SceneManager' inherits from both 'Mezzanine::ManagerBase' and 'Mezzanine::Singleton< SceneManager >'.
