

Mezzanine::ManagerBase

Mezzanine::Singleton<EventManager>

Mezzanine::EventManager

```
classDiagram
    class ManagerBase["Mezzanine::ManagerBase"]
    class Singleton["Mezzanine::Singleton<EventManager>"]
    class EventManager["Mezzanine::EventManager"]
    ManagerBase <|-- Singleton
    ManagerBase --> EventManager
```

The diagram illustrates the relationship between three classes in the Mezzanine library. At the top, two boxes represent 'Mezzanine::ManagerBase' and 'Mezzanine::Singleton<EventManager>'. A horizontal line with upward-pointing arrows at both ends connects them, indicating a relationship. Below this, a third box represents 'Mezzanine::EventManager'. A vertical line descends from the center of the top line, and a horizontal line branches off to the left, ending in an upward-pointing arrow that connects to the bottom of the 'Mezzanine::ManagerBase' box. This structure typically represents a base class and a singleton derived from it, both of which interact with or manage an EventManager.
